

Telecom / Cable Service Provider

Costly downtime in your cabinets, data centers, and tower installations is painful to your customers and expensive for your operations. Room Alert offers you critical information to help reduce costly outages.

Monitoring with Room Alert enhances uptime and reliability by addressing the environmental factors that account for almost 30% of the downtime your installations experience, which traditional firewalls and security software don't monitor. For instance, if your HVAC system fails over a weekend during a summer heatwave, or a frozen pipe bursts and floods your facility, you need immediate alerts to ensure a swift response.

Room Alert delivers the essential environmental monitoring tools to maximize uptime, and serves as a crucial component in preventing service disruptions for your customers. By tracking critical environmental conditions, Room Alert monitors and sensors provide instant real-time notifications of events that could lead to downtime, effectively safeguarding your telecom installations. Room Alert is an ideal solution for diverse telecom & broadband global applications.

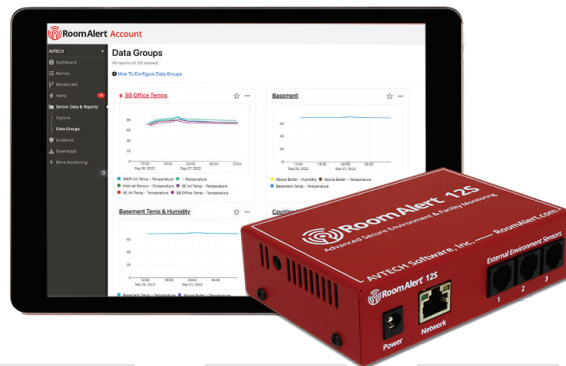

Room Alert 12S/SR

Built in temperature monitoring plus the ability to connect over 10 more external sensors. Features high level security including 2048-bit encryption, SNMP v3, SSL/SSH and more. Available in standard or rack-mount configurations.

Active Power

Digital Active Power Sensor w/ Temperature is a patented, award-winning sensor that monitors & reports power status and alerts when a device draws power or loses power, in addition to monitoring temperature.

Temperature & Humidity

Digital Temperature & Humidity Sensor measures temperature and humidity, as well as dew point and heat index which indicate the "real feel" so you can keep your equipment and employees safe.

Room Entry

Room Entry Sensor recognizes doors or rack cabinets being open and increases security. It helps to manage who has access to the facilities.
